COMPOSITES ENGINEERING

An International Journal

AIMS AND SCOPE

In response to the growing use of composites in the aerospace, mechanical and ocean engineering industries across the world, the international journal *Composites Engineering* will serve as a forum for the publication of original papers in the broad area of composite materials and engineering structures.

The journal will seek submissions from authors on theoretical and experimental investigation of composite structures and materials. Particular emphasis will be placed on the design and analysis of new structures and new materials in all application areas but particularly in the new vehicle-related environments.

The journal will specifically deal with the design and manufacturing of composite materials as intended for and used in engineering structures and their performance under high temperatures, high stresses and corrosive environments. Other aspects included will be buckling, vibration and non-linear behaviour of structures made from these novel materials.

Letters to the Editor, reviews and announcements of forthcoming conferences are invited.

ContentsDirect delivers the table of contents of this journal, by e-mail, approximately two to four weeks prior to each issue's publication. To receive this free service complete and return the form at the back of this issue or send an e-mail message to c.green@elsevier.co.uk.

Disclaimer: Whilst every effort is made by the publishers and editorial board to see that no inaccurate or misleading data, opinion or statement appears in this journal, they wish to make it clear that the data and opinions appearing in the articles and advertisements herein are the sole responsibility of the contributor or advertiser concerned. Accordingly, the publishers, the editorial board and editors and their respective employees, officers and agents accept no responsibility or liability whatsoever for the consequences of any such inaccurate or misleading data, opinion or statement.
